

COMPAD

Medi-Gel™

Hot Cold Pack

HOT COLD THERAPY

The principle of hot / cold therapy to treat minor injuries is recommended by doctors. Cold therapy reduces the surface temperature causing the veins to shrink thus controlling swelling. Heat therapy increases skin temperature causing vein dilation and increased blood flow thus aiding the healing process.

HOW TO USE

Medi-Gel Packs can be heated by placing in boiling water, or by heating it in a bowl of water in a microwave oven. Medi-Gel Packs can be placed in the freezer to make it cold. For complete directions, see the information at the back of each packaging.

FOUR MODELS FOR DIFFERENT BODY POSITIONS

Medi-Gel now comes in 4 different types of packaging for different parts of the body and for different needs. Contact us our retailers for more information. Medi-Gel is available at leading pharmacies, department stores and other healthcare outlets.

A general purpose pack, it can be used hot or cold on any part of the body for muscle sprains and aches, fever and toothache, to reduce swelling and bruises.

Specially shaped to fit the curve of the neck area, Medi-Gel Neck Pack can be used either hot or cold to soothe and relieve muscular tension and aches at the back of the head, neck and shoulders

Specially designed to fit the forehead, Medi-Gel Forehead Pack comes with a Velcro head band to keep it securely in place. Especially useful for the relief of fevers and is ideal both for adults and children

Specially contoured to fit over the eyes, Medi-Gel Eye Pack can be used either hot or cold to soothe eye strain, relieve puffiness of eyelids and to provide relaxation for the eye area
